2.1Priority thrust areas

S. No	Thrust area
1.	Varietal substitution in rice, particularly for rain-fed upland and medium land types.
2.	Crop diversification from rice to pulse (Arhar), oilseed (Sunflower, ground nut) sugarcane and tuber crop based cropping systems.
3.	Integrated nutrient management by incorporation of crop residues/forest litters, green manuring, improvised composting and balanced use
	of inorganic and bio-fertilizers.
4.	Popularizing ecofriendly pesticides and bio-control agents and IPM practices for borers in sugarcane, rice and brinjal.
5.	Revolutionizing fresh water fish farming by including freshwater prawn (Scampi) in composite pisciculture system.
6.	Empowerment of rural youth and SHGs through remunerative agro based enterprises like value addition of fruits and vegetables,
	mushroom production, bee keeping, floriculture, poultry farming and nursery raising.
7.	Rejuvenating mango and cashew orchards and developing Alternative Land Use system models.
8.	Scientific method of fish production with freshwater prawn culture, integrated farming system research and stunted fingerlings & yearlings
	stocking.
9.	Income generation from backyard poultry for economic upliftment.
10.	Raising of fuel wood, timber and fodder yielding species to meet the local demand and production, value addition of minor forest products.

1.	Title of On Farm Trial	Assessment on preparation of Sugarcane Jaggery
2.	Problem diagnosed	Due to black in colour and poor quality of jaggery, fetching less market value and
		consumer acceptance
3.	Details of technologies selected for assessment/refinement (Mention either Assessed or Refined)	Assessment TO ₁ :Vegetable clarificants like 500 ml. of ladies finger plant extract per 400 liters of cane juice will be used to adjust the pH to obtain better colour of the produce TO ₂ :Vegetableclarificants like 500 gm of groundnut paste per 400 liters of cane juice will be used to adjust the pH to obtain better colour of the produce.
4.	Source of Technology (ICAR/ AICRP/SAU/other, please specify)	TNAU
5.	Production system and thematic area	Cottage based
6.	Performance of the Technology with performance indicators	Quality of Jaggery (Colour)
7.	Final recommendation for micro level situation	Natural clarificants clarify the juice better than using chemicalclarificants like Calcium hydroxide which is hazardous for human health point of view.
8.	Constraints identified and feedback for research	After implementing the technology options still, the colour of the jaggery becomes black colour after 2-3 days of solidification of jaggery. It needs some other ingredients to retain the golden brownish colour of the jaggery.
9.	Process of farmers participation and their reaction	Training and On farm Trial. Farmers need the technology for golden brownish colour of the jaggery for better consumer acceptance with good market price of the produce.

Thematic area: Value addition

Problem definition: Due to black in colour and poor quality of jaggery, fetching less market value and consumer acceptance Technology assessed: Assessment on preparation of Sugarcane Jaggery

Technical Feedback on the demonstrated technologies

S1.	Crop	Feed Back
No		
1.	Vegetable Seedlings	Adopted by the farmers for the portable low cost bamboo structure with 100 micron polythene as cladding material resulted more germination percentage with better seedling growth in less time as compared to open field condition.
2.	Tomato	Accepted adopted by the farmers for its longer keeping quality and higher yield with year round production.
3.	Marigold	Ceracola variety of marigold perform better than the other variety
4.	Paddy Straw mushroom	More Research on alternate substrate for paddy straw mushroom.
5.	Lemon grass	This crop requires adequate irrigation show that the yield will be more by 6time crop cuttings instead of 4times in a year
6.	Carps	Improved rohu "Jayanti" should be replaced for normal Rohu to increase the production
7.	Finger millet	Yield potential of Arjun variety of finger millet is higher than the local variety
8.	Poultry	Kadaknath breed is lower in cholesterol(0.73-1.37%) ,rich in minerals like niacin,protein,fat,Ca,P,Fe and vit. like B1, B2,B6,C,E.
9.	Bee keeping	Bee keeping is a profitable enterprise.

4.4. Details of innovations recorded by the KVK

Thematic area Farm Mechanization	'hematic area
----------------------------------	---------------

Name of the Innovation	Paddy thresher cum winnower
Details of Innovator	The innovator is basically a progressive farmer of the district. He owns about 5ha of cultivatable land. He cultivates paddy, pulses and vegetables.
Back ground of innovation	He got the technical support from KVK scientist as well as the line department to modify the thresher to use for multipurpose like winnowing. The machine is attached to a 1 hp motor to run.
Technology details	The paddy thresher cum winnower is a motor operated implement can use for threshing as well as winnowing of paddyhaving the capacity of 25 q per hr.
Practical utility of innovation	The implement saves time as well as labour as compared to manually threshing and winnowing process.

Thematic area	Farm Mechanization
Name of the Innovation	Pwertiller attached rice mill
Details of Innovator	The innovator is basically a progressive innovative farmer of the
	district. He owns about 7 ha of cultivatable land. He cultivates paddy,
	pulses, maize, groundnut and vegetables.
Back ground of innovation	He got the technical support from KVK scientist as well as the line
	department to attach a huller to the power tiller for multi purpose use.
Technology details	The implement is run by the power of powertiller. The hulling
	attachment to the PTO power of powertiller and 15 hp power tiller can
	help to run the machine with milling of capacity 20q per her.
Practical utility of innovation	Such type of arrangement can help the people to hull the rice at door
	step easily.

4.5. Details of entrepreneurship development

Entrepreneurship development
